

# MEA MERCHANT TOKENIZATION

Mea Merchant Tokenization replaces card-on-file storage with tokenized credentials for Mastercard, Visa and Amex payment cards through a single integration. It reduces the risk of fraud while improving acceptance rates of cards that are always up to date.

## Key Features

Replaces cards-on-file with tokenized credentials

Supports Mastercard, Visa and Amex through a single integration

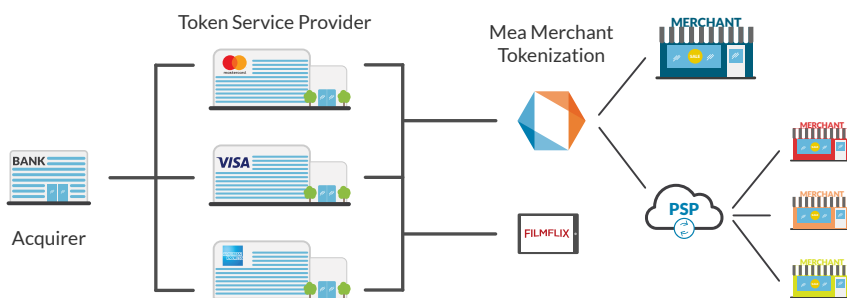

Improved transaction security

## Why Mea Merchant Tokenization?

Mea Merchant Tokenization supports all major payment schemes via a single integration and replaces cards-on-file with tokenized credentials, which:

- ▶ Reduces the risk of fraud by replacing sensitive card credentials with a tokenized alternative.
- ▶ Guards against the loss in sales that results from out of date card transactions being automatically declined.
- ▶ Allows consumers to push their cards directly from the bank's interface to the merchant.

## Supported Schemes

## Mission accomplished in four steps:

**Reach Out**

All it takes is an email and we will assist you

**Open project**

with the scheme(s) of your choice

**Integration/Implementation**

Our experts will guide you easily and efficiently

**Go live**

You're ready to go!
